Professional Profile

Software developer with a Higher Vocational Education Diploma in Agile Java Development (2025) and experience building and maintaining web systems with a focus on security, integrations, and quality. Experienced with role-based access control (RBAC) and authentication and authorisation using OAuth2/JWT/Keycloak and Spring Security. Comfortable working in agile teams with code review, documentation, and test-driven development. Certified in Microsoft Azure Fundamentals (AZ-900). Regularly works with AI-assisted development tools including Claude Code, GitHub Copilot, and Cursor.

Technical Skills

Roles & access: RBAC, Spring Security, OAuth2, JWT, Keycloak

Backend: Java (Spring Boot, REST, Maven), C# (.NET 8)

Frontend: React (JavaScript/TypeScript), Angular

API & integration: REST, JSON/HTTP, external APIs, OpenAPI/Swagger

DevOps & deployment: Docker, CI/CD (Azure DevOps, GitHub Actions), Linux, Nginx, HTTPS

Testing & quality: JUnit, Mockito, xUnit, Vitest, Postman, TDD, Playwright (learning)

AI tools: Claude Code, GitHub Copilot, Cursor, Codex

IDEs: IntelliJ, VS Code, Visual Studio

Databases: PostgreSQL, MySQL, H2, Flyway

Ways of working: Scrum, Kanban, documentation, code review

Work Experience

Software Developer Intern (LIA) - The Knowledge Formula (remote)

10/2024 - 03/2025

- Tested and validated features in a React and Node.js application, identifying and documenting bugs with clear reproduction steps.
- Tested API integrations including the Groq AI SDK and SerpAPI, focusing on error handling and edge cases.
- Implemented event registration with input validation and error messages, AI-generated event descriptions via Groq SDK, and event data via SerpAPI.
- Built a GDPR-compliant cookie consent banner using React and Material UI, with user preferences stored in Local Storage.
- Implemented email notification settings in the UserProfile component using Axios and React Hooks.
- Worked in an agile remote team with daily stand-ups, code reviews, and documentation.

Warehouse Operative - ICA Sverige AB

05/2018 - present

- Started on assignment via Randstad Technologies Sweden (05/2018 - 08/2019), then transitioned to a direct employment contract with ICA Sverige AB.
- Order handling, packing, and quality control.
- Effective teamwork under time pressure.
- Forklift operation.

Selected Projects

TeruBase - Maven Plugin for Spring Boot/JPA Seed Data | [GitHub](#) | 2026

Tech: Java 21, Spring Boot 3.4+, Maven, JPA/Hibernate

- Built a Maven plugin and optional Spring Boot starter that scans compiled JPA entity metadata and produces a reviewable seed-data plan (schema-context.json + seed-plan.md) without calling an AI provider.
- Export commands (terubase:export-data-sql, terubase:export-flyway) copy validated INSERT-only SQL into data.sql or a Flyway migration file, complementing existing migration tooling rather than replacing it.

- Safety defaults block destructive SQL, prevent production use, and keep AI generation optional and export-first with `execute=false`.
- Published to [Maven Central \(io.github.abasheger\)](#) with GitHub Actions CI, build verification, and an invoice demo app.

DB Schenker MCP Server - Sendify Code Challenge | [GitHub](#) | 2026

Tech: TypeScript, Node.js, Model Context Protocol (MCP), Zod, Vitest, GitHub Actions

- Built a Model Context Protocol (MCP) server that exposes a single `track_shipment` tool for looking up DB Schenker and DSV shipments by public reference number. Developed as a submission for the Sendify code challenge.
- Implemented a defensive parser that normalises undocumented data from the public tracking API into a stable Zod schema, with typed error codes for cases such as not found, rate limited, and timeout.
- Wrote an HTTP client with request timeouts, exponential backoff retry on transient failures, and handling for the proof-of-work CAPTCHA the public API occasionally returns.
- Used dependency injection throughout so unit tests run offline against mocked HTTP responses; tested with Vitest and CI via GitHub Actions.

FX Quote & Trade Portal - Full-Stack Project | [GitHub](#) | 2026

Tech: Java 17, Spring Boot, Angular, PostgreSQL, Flyway, Docker, GitHub Actions, Nginx

- Built a complete FX workflow covering quote requests, quote expiry, trade booking, and trade history with filtering and pagination.
- Developed REST APIs with a layered architecture (Controller-Service-Repository), input validation, and OpenAPI/Swagger documentation.
- Integrated PostgreSQL with Flyway migrations and containerised the full stack with Docker Compose and Nginx reverse proxy.
- Automated CI/CD with GitHub Actions: backend build/tests, frontend build/lint, security scanning, Docker image builds, and integration tests.

Guardrail4J - Spring Boot LLM Cost Guardrail | [GitHub](#) | 2026

Tech: Java 21, Spring Boot 3.3+, Spring AOP, SpEL, Maven

- Built an open source Spring Boot starter library that enforces LLM cost budgets via a single `@LLMGuarded` annotation, with no changes required to existing application code.
- Supports budget enforcement at daily, monthly, per-user, and per-tenant levels with configurable WARN, BLOCK, or FALLBACK actions on violation.
- Implemented cost estimation for OpenAI and Anthropic models via a configurable price table, and dynamic user and tenant identity resolution from method arguments using Spring AOP and SpEL.
- Exposes REST monitoring endpoints for live usage inspection and cost reporting grouped by provider, model, user, tenant, and feature.

Loman Ståd - Business Website | [lomanstad.se](#)

Tech: React, Vite, Tailwind CSS, EmailJS

- Built a responsive single-page website for a local cleaning company in Sweden.
- SEO-optimised with sitemap, Schema.org structured data, and Google Search Console.
- Contact form via EmailJS, deployed on Vercel with a custom domain.

DevOps Project - Azure CI/CD Pipeline with E-commerce App | [GitHub](#)

Tech: Azure DevOps, Azure App Service, Azure Container Registry, Docker, React, Java, Spring Boot, Maven

- Deployed a full-stack e-commerce application (React frontend and Spring Boot backend) to Azure App Service via complete CI/CD pipelines in Azure DevOps.
- Configured Docker builds in the pipeline, pushed images to Azure Container Registry, and managed HTTPS communication between services.

Job Agent - AI-Assisted Job Search Automation | [GitHub](#) | 2025

Tech: Python, GitHub Actions, Anthropic API (Claude Haiku), Telegram Bot API, Supabase, Vercel

- Built a daily job search agent that fetches roles from the Arbetsformedlingen Jobtech API, Remoteive, and RemoteOK, deduplicates across sources, and filters out stale, low-quality, and senior-level listings before any AI calls.
- Ranks a shortlisted batch of roles with a single Claude Haiku call using prompt caching, keeping the cost to roughly one cent per run.

- Sends a ranked Telegram digest with inline Apply/Save/Not Interested buttons; button callbacks are processed instantly via a Vercel serverless webhook and persisted in Supabase.
- Refactored from a single script into a modular package with separate modules for configuration, filtering, sources, scoring, state, Telegram delivery, and pipeline orchestration.

StackLens - Java CLI Log Analyzer | [GitHub](#)

Tech: Java 17, JUnit 5, GitHub Actions CI, picocli

- CLI tool that analyses Java and Spring Boot logs and stack traces to explain the root cause of errors.
- Detects 13 error types with severity levels (CRITICAL/ERROR/WARNING) and occurrence counting (e.g., "NullPointerException x47").
- Supports file analysis, inline stack traces, and stdin piping (kubectl logs, docker logs, and similar).
- Clean layered architecture with separate detectors, classifiers, and formatters (human-readable and JSON output).
- Tested with JUnit 5 and CI/CD via GitHub Actions.

Music Analytics Platform | [GitHub](#) | [Live](#)

Tech: Java, Spring Boot, Spring Cloud, Netflix Eureka, API Gateway, React, Docker, Docker Compose

- Spotify-inspired analytics platform with a microservice architecture: recommendation, statistics, and user-tracking services coordinated via Netflix Eureka and API Gateway.
- Full stack containerised with Docker Compose; frontend deployed live on Netlify.

EventFlow - Event-Driven Microservices with Kafka | [GitHub](#)

Tech: Java 21, Spring Boot 3.2, Apache Kafka, PostgreSQL, Docker, GitHub Actions

- Two-service event-driven system where an Order Service publishes domain events to Kafka and a Notification Service consumes them asynchronously.
- Robust message handling with exponential backoff retry and dead-letter topic routing; CI/CD via GitHub Actions.

PassageLite - Access Control Management API | [GitHub](#)

Tech: C# (.NET 8), ASP.NET Core, PostgreSQL, Entity Framework Core, Docker, xUnit, Serilog

- REST API in ASP.NET Core for access control with role-based authorisation.
- JWT authentication (Admin/User) with endpoints to grant, revoke, and check access.
- PostgreSQL with Entity Framework Core (code-first), Docker Compose, Swagger UI, and xUnit tests.

DevFlow Agent - GitLab Activity Analyser (Hackathon MVP) | [GitHub](#) | [Live](#)

Tech: React, TypeScript, Vite, Vercel serverless, Gemini API

- Built for the Google Cloud Rapid Agent Hackathon. Accepts pasted GitLab context (issues, merge requests, CI status) or fetches it live from a public GitLab project via the public API without authentication.
- Sends context to a Vercel serverless route backed by the Gemini API and returns a structured readout covering blockers, risks, recommended next actions, and a daily standup summary.
- Includes a mock/demo fallback so the app works end-to-end even when the Gemini API key is absent or rate-limited.
- Intentionally scoped as an MVP; GitLab MCP integration and Google Cloud Agent Builder orchestration are the next planned steps.

BörsVy - Stock Analysis Platform (Graduation Project) | [GitHub](#) | [Live](#)

Tech: Java 17, Spring Boot, React, Vite, Tailwind CSS, H2, Nginx, HTTPS, Groq API

- Full-stack application in Java (Spring Boot) and React.
- API integrations (Finnhub, Polygon, SerpAPI) and AI-powered news sentiment analysis via Groq API.
- Running in a Linux environment with Nginx and HTTPS, with a focus on stability and long-term production maintenance.

Open Source Contributions

JMailer Spring Boot | [GitHub](#)

Tech: Java, Spring Boot 3.4.2, SpringDoc 2.8.4

- Contributed to an open source email handling library for Spring Boot.
- Updated dependencies (Spring Boot 3.4.2, SpringDoc 2.8.4) and removed unused components.

Education

Higher Vocational Education Diploma in Agile Java Development (400 credits) - EduGrade

09/2023 - 04/2025

Java, web services, databases, DevOps, design patterns and architecture, testing, and agile methods. 22 weeks of workplace-based learning (LIA) and a graduation project.

Bachelor of Science in Development Studies (180 ECTS) - Lund University

2010 - 2013 | Degree awarded 06/2025

Major: Human Geography.

Foundations of Machine Learning - Linköping University (freestanding course)

01/2025 - ongoing

Supervised and unsupervised learning, neural networks, and model evaluation. Practical exercises in Python.

Programming in C# II - Malmö University (freestanding course)

01/2026 - ongoing

Advanced OOP in C#, inheritance, polymorphism, interfaces, WPF UI development, .NET Core.

Programming in C# - Malmö University (freestanding course)

08/2021 - 01/2022

Foundational C# programming, OOP, and GUI development (Windows Forms).

Introduction to Java Programming - Luleå University of Technology (freestanding course)

09/2022 - 01/2023

Course completed, examination pending.
